Email Sequence Operating System

CROWDSTREET

First-Investment Activation Sequence

REGISTERED NEVER-INVESTED ACCREDITED INVESTOR ACTIVATION · 5 EMAILS

~45,000 registered accredited investors · Target deployment: April 15, 2026

Prepared for CrowdStreet Investor Relations Marketing Team · March 2026

All performance references and investment characterisations require SEC legal review before deployment

STRATEGIC INTELLIGENCE BRIEF

01 — The Central Strategic Problem

There are three things CrowdStreet knows about these 45,000 investors that previous sequences have not used correctly. The first: they have 28% open rates, meaning they are reading. The conversion failure is not attention — it is activation. The second: investors who attend a live deal webinar before investing convert at four times the rate of those who go directly to deal pages. The current CTA architecture sends people to deal pages. This is the wrong funnel and the sequence corrects it. The third: investors who complete a first transaction go on to invest an average of 3.2 more times within 18 months. The first deal is not a transaction — it is the validation event that unlocks a compounding investment relationship.

None of these three data points are being used in the current sequence architecture. This is the diagnosis. The sequence is the fix.

The deeper strategic problem is the trust gap at a specific price point. A $25,000 minimum investment to a platform the reader has never transacted with is a rational hesitation, not a behavioral failure. These readers are not procrastinating. They are waiting for the kind of platform-level trust signal that previous educational sequences have not provided. The sequence addresses this directly — beginning with a candid acknowledgment of the reader's rational position and building from there.

02 — The Nightingale Context

STRATEGIC NOTE — SENSITIVE

The brief explicitly acknowledges that sophisticated accredited investors in this audience will have researched CrowdStreet before investing — and will likely be aware of the 2023 Nightingale Properties situation. The sequence cannot reference this directly and does not. What it must do instead is address the underlying concern that incident surfaces for any sophisticated investor: what happens on this platform when a deal goes wrong? What is the investor's actual experience when a sponsor fails to perform?

Email 2 exists entirely to answer this question with the directness that sophisticated investors require and that no CrowdStreet sequence has yet provided. The email acknowledges deal failures as an inherent reality of commercial real estate investing, describes the platform's obligations and the investor's position when they occur, and frames platform selection as a risk management decision — not just a returns decision. This is the correct strategic response to the Nightingale shadow: not avoidance, not denial, but honest contextualisation of what deal risk means on this platform specifically.

Legal must review Email 2 with particular attention to how deal failures are characterised. The objective is honesty that builds trust without inadvertently creating liability. That is a line legal must draw. SERAPH marks the specific sections requiring compliance scrutiny.

03 — The Funnel Architecture Change

RECOMMENDED CTA PIVOT: DEAL PAGES → WEBINAR REGISTRATION

Current sequence architecture: email CTA → deal page → (hoped-for) investment.

Recommended sequence architecture: email CTA → live deal webinar registration → webinar attendance → investment.

The brief's data point — 4x conversion rate for investors who attend a webinar — is the most important strategic fact in this engagement. The current approach skips the highest-conversion step in the funnel. Every email in this sequence that makes a CTA ask directs to webinar registration as the primary action. Deal page links are secondary. This is not a minor adjustment to the email copy — it is a structural change to the conversion funnel that the sequence implements and that the CRM and growth teams must operationalise.

04 — Reader Profile

Accredited investor, 35–60, predominantly male. Doctor, lawyer, engineer, tech executive, or business owner. Has a financial advisor and an investment portfolio. Understands commercial real estate at a functional level — knows what cap rates, IRRs, and debt service coverage ratios mean. Is not intimidated by a deal memo. Has registered on the platform and browsed deals, meaning he has self-selected as interested. Has not invested, meaning a specific, rational barrier is preventing the transaction.

This reader is the inverse of every other reader in the previous three sequences. He is not uninformed about the product. He is not intimidated by the minimum. He is not confused about how the platform works. He is waiting for a reason to trust the platform with a non-trivial amount of real money. That is a different problem than any of the previous briefs — and it requires a different approach.

Awareness Stage: Stage 5 (Most Aware — with a platform-specific trust gap)

The reader is at the highest awareness stage before conversion. He knows CrowdStreet, understands what it does, has seen the deals, and has not invested. The remaining gap is not information — it is institutional trust at the first-transaction threshold. The sequence does not educate. It builds the specific trust architecture that a $25,000 first commitment requires.

05 — Drive Mapping

Drive	Type	Expression in This Sequence
Financial Security	Life Force (Primary)	Inflation-resistant, income-generating real assets — the professional investor's version of money working reliably
Achievement / Control	Life Force (Secondary)	Direct deal selection — owning specific assets in specific markets, not index-fund exposure to a category
Status / Identity	Learned Desire	Being an investor with institutional-quality deal access, not just retail market exposure through a brokerage
Self-Improvement	Learned Desire	Building the evaluation frameworks of a sophisticated real estate investor — the knowledge compound that the brief's 3.2x data describes

06 — Fear Architecture (Three Layers)

Layer	The Fear	SERAPH's Dissolution Method
Surface	*"How do I know this platform can be trusted with $25,000 of my money?"*	Email 1: Name the rational fear directly and acknowledge it as the correct question to ask. Not reassurance — validation. Then show the answer through platform transparency.
Surface	*"What is my recourse if a deal goes wrong?"*	Email 2: The dedicated deal-risk email. Honest about the mechanics of what happens on both sides when a deal underperforms or fails. This is the question sophisticated investors are actually asking when they Google CrowdStreet.
Structural	*"I already have REIT exposure. Why do I need direct commercial real estate?"*	Email 4: The structural difference between REIT returns (driven by public market sentiment, liquidity premium, correlates with equities) and direct real estate returns (driven by underlying asset performance, illiquidity premium). Different instruments, different drivers.
Structural	*"I don't have time to evaluate individual deals properly. What if I pick the wrong one?"*	Email 4: The Blended Portfolio as the structural answer to this fear — the instrument that provides real asset exposure without the time cost of individual deal analysis.

Layer	The Fear	SERAPH's Dissolution Method
Identity	*"I'm not the kind of investor who can evaluate a commercial real estate deal memo with enough confidence to put $25,000 in it"*	Email 3 (webinar) + Email 5 (first deal insight): The webinar as the tool that builds evaluation confidence. The first deal framed as the beginning of knowledge compounding, not a test to pass.

07 — Voice Profile (CrowdStreet)

Fingerprint	CrowdStreet Profile
Sentence Length	Medium to long. These are sophisticated readers who process dense information easily. Paragraph-length explanations are expected and respected.
Tone Register	Analytical, direct, peer-register. The tone of a deal memo written by someone who respects the reader's intelligence. Not warm — precise. Not reassuring — honest.
Vocabulary	"IRR," "preferred return," "equity multiple," "sponsor," "GP/LP structure." Technical vocabulary used correctly and without over-explanation. Readers know these terms.
Humour	Essentially absent. A dry factual observation, occasionally. Never as a persuasion tool.
Authority Mode	Evidence authority: track record, deal data, structural argument. Not charisma authority. "Here is the analysis" rather than "trust us."
Risk Register	High — risk is named, quantified where possible, and never minimised. "We would rather lose a nervous investor now than have a disappointed one later." This principle governs every line about returns.
CTA Register	"Register for the next deal webinar." "Explore the Blended Portfolio." Invitational and specific. Never urgent or pressured.
Absolute Boundaries	Cannot use "safe" in relation to any investment. No guaranteed return language. No forward-looking performance projections without SEC-approved disclosure. No minimising deal risk. No manufactured urgency. No enthusiasm theater.

08 — Sequence Architecture

Five emails over 18 days. The reader is sophisticated and does not need to be educated. The sequence does three things: names the rational barriers at each layer, delivers the trust architecture that those barriers require, and routes the reader through the highest-conversion funnel step (webinar) rather than directly to a deal page.

#	Email Job	Primary Barrier Addressed	Trust Move
1	Name the real barrier — platform trust at first-transaction threshold	Surface: "How do I know I can trust this platform with real money?"	Level 3→4: Naming the correct barrier is itself a trust signal — peer understanding over sales optimism
2	What happens when a deal goes wrong — proactive risk disclosure	Surface + Structural: "What is my recourse if something fails?"	Level 4: Radical disclosure — the Nightingale shadow handled through honesty, not avoidance
3	The webinar CTA pivot — why the funnel changes here	Identity: "I'm not confident enough to evaluate a deal memo alone"	Level 4→5: Webinar as confidence infrastructure, not sales tool
4	The Blended Portfolio — for the investor who doesn't want to pick deals	Structural: "I don't have time / I might pick the wrong deal"	Level 5: Specific tool for a specific concern — not a fallback, a solution
5	The first deal close — what actually happens after you invest	Identity: "I'm not ready to be that kind of investor yet"	Level 5: Conversion — the 3.2x data reframed as knowledge architecture, not loyalty metric

09 — SEC Compliance Architecture

REGULATORY FRAMEWORK

This sequence deploys to 45,000 accredited investors. All investor-facing communications for an SEC-registered investment adviser and a commercial real estate marketplace are subject to federal securities law review. Every email in this sequence has been assessed against this requirement.

Prohibited in all emails: (1) Performance guarantees or forward-looking return projections. (2) Use of the word "safe" in relation to any investment product. (3) Past performance figures without approved time-period specification and past-performance disclaimers. (4) Any characterisation implying capital protection. (5) Specific return figures without approved disclosure language.

Emails requiring SEC review: Emails 1, 2, and 5 contain investment characterisations and performance-adjacent language requiring legal review. Emails 3 and 4 primarily route to webinar/product pages and have lower compliance exposure but should still be reviewed. For an April 15th target, all emails should be submitted to legal by April 7th.

10 — Inference Flags

Inferred Element	Required Action
Concierge onboarding call offer	Not yet approved or resourced. If approved, this enters Email 5 as the primary risk-reversal mechanism — a dedicated investor relations call for first-time investors is the single most powerful conversion lever available at this price point. Update the close architecture immediately if approved.

Inferred Element	Required Action
4x webinar conversion rate	Confirm this is current and accurate internal data. This statistic is the structural basis for the CTA pivot in Email 3 — if the figure is not reliable or is outdated, the rationale changes. Confirm with data/analytics team.
3.2x repeat investment data	Confirm accuracy, time period, and whether this metric can be communicated externally in marketing materials. Legal must review before inclusion in Email 5.
Deal risk characterisation in Email 2	The email discusses deal failure mechanics in general terms. Legal must review this email with particular attention to what statements about platform obligations and investor recourse create or do not create. This is the highest-risk email in the sequence from a liability perspective.
Blended Portfolio structure	Email 4 characterises the Blended Portfolio as diversified across multiple deals. Legal and product teams should confirm this characterisation is accurate and that the "fund of funds" description is compliant.
Social proof / testimonials	All investor quotes are representative composites. Must be replaced with verified, consented real investor statements before deployment. Note: testimonials from investors about investment performance are subject to SEC testimonial rules — legal review of all testimonial language is mandatory.

THE SEQUENCE — FIRST-INVESTMENT ACTIVATION

5 Emails · 18-day arc · ~45,000 registered accredited investors who have never completed a first transaction

Email 1 — The Right Question

Day 0 of sequence · Legal review required — investment characterisation

JOB	Name the actual barrier (platform trust, not product understanding) and validate it as the correct analytical position. Establish that this sequence is different from previous deal announcement emails by immediately demonstrating it understands why those emails didn't convert.
TRUST LEVEL	Entry: Level 3 (aware but not converting) → Exit: Level 4 (reader feels understood, not sold to — the sequence has passed the intelligence test)

EMOTIONAL STATE	The reader enters mildly skeptical — has seen CrowdStreet emails before and has not acted on them. He exits having been given something he did not expect: a platform that named his rational hesitation accurately and then said "that's the right question to ask." That is a significant trust signal.
AWARENESS STAGE	Stage 5 (Most Aware). Do not explain the product — acknowledge where the reader actually is.

⚠ SEC / LEGAL REVIEW REQUIRED BEFORE DEPLOYMENT

Contains investment platform characterisation and references to track record — legal review required

Minimum 5 business days legal review. No performance figure, return reference, or investment characterisation may deploy without approved disclosure language.

SUBJECT LINE

You have looked at the deals. You haven't invested. That's the right response.

PREVIEW TEXT *The question you are actually asking — and why we haven't answered it yet.*

You have looked at the deals. You have not invested. That is the correct response.

Not a sales line. An accurate observation about how sophisticated investors approach a new platform.

You have $25,000 or more you are considering committing to a commercial real estate deal on a platform you have never transacted with before. The rational response to that situation is to research the platform, examine the deals, assess the track record, and wait until the trust level justifies the commitment. That is what you have been doing. That is not hesitation — it is due diligence.

Most platforms respond to this position by sending more deal announcements. We have done that. It does not address the actual question, which is not: are there good deals on CrowdStreet?

The actual question is: is CrowdStreet the platform I trust with a meaningful first investment in a relatively illiquid, high-minimum asset class?

What we would want to know in your position

How does CrowdStreet vet sponsors before a deal goes on the platform?
What happens to my investment if a deal underperforms or a sponsor fails to meet projections?
What is CrowdStreet's actual track record — not the best-case deals, the full distribution?
Is the Blended Portfolio actually diversified or is it just the same deals packaged differently?
How do I evaluate a deal memo on a commercial real estate project I have never seen before?

Over the next few weeks we are going to answer those questions directly. Not in the format of a marketing sequence — in the format of the conversation a rational investor deserves before committing real capital to an unfamiliar platform.

Starting Thursday with the one that matters most: what actually happens when a deal goes wrong.

— CrowdStreet Investor Relations

CrowdStreet, Inc. · 101 SW Main St, Suite 1100, Portland, OR 97204

STRATEGIC RATIONALE

Email Job: This email opens the sequence by doing the most counterintuitive thing available: validating the reader's non-conversion as rational rather than treating it as a behavior to be overcome. A sophisticated accredited investor who has been receiving deal announcement emails and not investing is not confused or uninformed. He is waiting for platform-level trust. Naming this correctly — and naming it first, before any product pitch — is the highest trust move available at sequence entry.

"You have looked at the deals. You have not invested. That is the correct response.": The subject line is the email's most important trust signal. It says: we understand your position accurately enough to describe it without hedging. This is the analytical voice doing what it does best — precision as credibility. Most investors will read this subject line and think "how did they know that," which is the correct question to be asking when they open the email.

The Question List: The five questions in the content box serve as both an empathy signal and a preview of the sequence's agenda. They are the actual questions sophisticated investors ask before committing to a new platform. The investor who sees his own questions listed here knows the sequence is written by someone who understands his decision architecture — which is itself a reason to keep reading.

"Starting Thursday with the one that matters most: what actually happens when a deal goes wrong.": This is a deliberate loop that references the Nightingale shadow without naming it. Any sophisticated investor who has Googled CrowdStreet knows that deals have failed on the platform. This line acknowledges that knowledge, promises a direct answer, and names it as the most important question. It earns Thursday's open with a commitment that the reader has not heard from a financial platform before.

SEC Note: This email contains no performance figures but does characterise CrowdStreet as a legitimate investment platform. Legal should review for any implied guarantees or characterisations that could be construed as investment advice.

Email 2 — What Happens When a Deal Goes Wrong

Day 4 of sequence · Highest-priority legal review required

JOB	Address the Nightingale shadow through proactive, honest disclosure of what deal failure actually means for investors on this platform. This email will be uncomfortable for a marketing team to send. It is the most trust-building email in the sequence.
TRUST LEVEL	Entry: Level 4 → Exit: Level 4-5 (radical transparency produces the deepest available trust move — a platform that tells you the worst before asking for the best)

EMOTIONAL STATE	The reader enters already aware of CrowdStreet's deal failure history from his own research. He exits having received the first direct, honest characterisation of what that experience is like from the inside — and finding it more reassuring than he expected, because it does not hide.
AWARENESS STAGE	Stage 5. The reader has already processed this question through Google. The email does not introduce new information — it gives the CrowdStreet version of what the reader already suspects is true.

⚠ SEC / LEGAL REVIEW REQUIRED BEFORE DEPLOYMENT

HIGHEST PRIORITY — Contains characterisation of investor rights in distressed deals, platform obligations, and GP/LP structure. Legal must review every specific statement about investor protections before deployment.

Minimum 5 business days legal review. No performance figure, return reference, or investment characterisation may deploy without approved disclosure language.

SUBJECT LINE

What happens when a deal goes wrong. (The complete answer.)

PREVIEW TEXT *The question sophisticated investors ask before committing capital to a new platform.*

What happens when a deal goes wrong.

We said we would answer this first. Here is the complete answer.

Commercial real estate deals fail. Not all of them. Not even most of them. But some do — through sponsor mismanagement, through market conditions that deteriorate beyond underwriting assumptions, through construction delays that exhaust reserves, through interest rate movements that make refinancing at exit impossible. These are real risks in every commercial real estate investment, on every platform, at every price point. They were real risks before CrowdStreet existed and they will be real risks after.

When a deal on the CrowdStreet platform underperforms or fails

What you have as an investor:

Your investment is in the deal entity — a specific LLC or partnership structured around the asset. Your rights, protections, and claim on the asset are governed by the operating agreement you signed when you invested. In the case of underperformance, the sponsor is obligated to provide regular reporting on the project's status. In the case of insolvency or sponsor failure, the deal entity's assets — the property itself — remain the security for investors, governed by the terms of the operating agreement. [⚑ LEGAL TO REVIEW: Ensure this characterisation accurately reflects actual investor rights and does not overstate protections.]

What CrowdStreet does:

CrowdStreet provides investor communications, deal reporting, and access to platform resources for investors in distressed deals. We are not the manager of the deal — the sponsor is. We do not have the legal authority to take over a deal on a sponsor's behalf. What we can and do provide is a communications infrastructure that keeps investors informed and access to investor relations support. [⚑ LEGAL TO REVIEW: Accurate characterisation of CrowdStreet's actual obligations in distressed deal situations required.]

What you should know before investing:

Read the operating agreement. Understand the GP/LP structure and what your rights are as a limited partner. Understand the preferred return waterfall and how distributions are structured. Understand the exit assumptions. Every deal memo provides this information. If you do not understand a section, the deal webinar and our investor relations team are the resources for that question. We would rather you invest having understood the risk than invest without having read the documents.

That is what we can tell you honestly about what happens when things go wrong. There is no version of this answer that makes commercial real estate investing risk-free. If that is what you are looking for, this is not the right asset class.

If what you are looking for is transparent disclosure of what the risks actually are and a platform that tells you the truth about them — this is the answer to that question.

On Tuesday: the question of how deals get onto the platform in the first place, and why that matters more than any individual deal's projected return.

— CrowdStreet Investor Relations

CrowdStreet, Inc. · 101 SW Main St, Suite 1100, Portland, OR 97204

STRATEGIC RATIONALE

Email Job: This is the most strategically essential email in the sequence and the most legally sensitive. Its existence is the direct response to the Nightingale shadow — the brief acknowledges that sophisticated investors have researched CrowdStreet and know about past deal failures. The choice is between: (a) not addressing this and hoping the reader doesn't raise it, or (b) addressing it directly with the honest characterisation of what deal risk means on this platform. Option (a) is the approach of every previous CrowdStreet nurture sequence. Option (b) is this email.

The Trust Mechanics of Disclosure: A platform that proactively discusses what happens when deals go wrong before being asked is a platform that has considered the question and arrived at an answer it can stand behind. A platform that avoids the question is a platform that either hasn't thought about it or doesn't want to say. Sophisticated accredited investors — the doctors, lawyers, and tech executives in this audience — know the difference. They are in professions where avoiding the hard disclosure is a liability, not a strategy.

"If that is what you are looking for, this is not the right asset class.": This sentence is the voice statement the brief identifies as CrowdStreet's core principle: "We would rather lose a nervous investor now than have a disappointed one later." Putting this statement explicitly in Email 2 — at the point where the hardest questions have just been answered — is a trust conversion move. The investor who reads this and does not feel addressed by it is the investor who continues. The investor who reads it and feels it is written about him should not be investing in this asset class.

Legal Priority: This email must be the first submission to legal. The characterisations of investor rights in distressed deals, CrowdStreet's obligations and limitations in those scenarios, and the GP/LP structure description are all areas where inaccuracy creates liability. The ⚑ markers identify each section requiring specific legal review and confirmation.

The Loop: "How deals get onto the platform in the first place" — the next email's topic — reframes the risk conversation toward sponsor due diligence. This is the constructive turn after the hard disclosure: we've told you what happens when things go wrong, next we'll show you how we try to prevent it.

Email 3 — The Webinar CTA

Day 8 of sequence · Legal review required — conversion data claim

JOB	Execute the funnel architecture change. Primary CTA is webinar registration, not deal page. Explain why — using the 4x conversion data to make the case for the webinar as the investor's best next step, not CrowdStreet's best marketing tactic.
TRUST LEVEL	Entry: Level 4-5 → Exit: Level 5 (the reader understands why the webinar is the right move and acts on it — the CTA is his own decision, not a platform directive)
EMOTIONAL STATE	The reader enters still evaluating. He exits having been given a specific, actionable next step that addresses his actual barrier (evaluation confidence) rather than asking him to commit capital before he has it.
AWARENESS STAGE	Stage 5. The email's job is not to build awareness — it is to lower the action threshold by providing the right next step.

⚠ SEC / LEGAL REVIEW REQUIRED BEFORE DEPLOYMENT
Contains internal conversion data claim (4x webinar conversion rate) — legal must confirm this figure can be communicated externally before deployment
Minimum 5 business days legal review. No performance figure, return reference, or investment characterisation may deploy without approved disclosure language.

SUBJECT LINE
We have been sending you to deal pages. That's the wrong step. Here's the right one.
PREVIEW TEXT *Why first-time investors convert at 4x after attending a deal webinar — and why we stopped routing around it.*

We are sending you to a webinar. Not a deal page. Here is why that matters.

Most platforms route investor emails to deal pages. CTA in the email, deal page on the other side, investment flow after that.

We have done this. We know what the conversion data looks like. It is not the right funnel for a first-time investor.

What the data shows

> Investors who attend a live CrowdStreet deal webinar before making their first investment convert at approximately four times the rate of investors who go directly from email to deal page. [⚑ LEGAL TO CONFIRM THIS FIGURE CAN BE STATED EXTERNALLY]
>
> The conversion gap is not about enthusiasm. It is about evaluation confidence. A deal page provides information — sponsor background, financial projections, deal structure, asset description. A webinar provides the ability to ask questions, hear how the sponsor and CrowdStreet's analyst team respond to hard questions in real time, and assess the deal with a level of analytical depth that a static page cannot provide.
>
> Investors who convert from webinars are more informed. Informed investors ask better questions, have more realistic return expectations, and — when deals underperform — are less likely to be surprised. That outcome is good for both sides of the transaction.

We have been running deal webinars on a regular basis. They are attended primarily by investors who are already engaged with the platform and are evaluating specific deals in real time.

What we have not done is route first-time investors — people in your position — toward the webinar as a primary step. We have been sending you to deal pages instead. This email is the change.

The next scheduled deal webinar is [DATE — TO BE CONFIRMED AND INSERTED]. It covers [DEAL NAME / ASSET CLASS — TO BE CONFIRMED]. Registration is open now.

REGISTER FOR THE NEXT DEAL WEBINAR

If the next scheduled webinar does not work for your calendar, upcoming webinar dates are listed on the CrowdStreet platform. We run them regularly across multiple asset classes and deal types.

— CrowdStreet Investor Relations

STRATEGIC RATIONALE

Email Job: This email executes the most important strategic recommendation in this brief: the funnel architecture pivot from deal page to webinar. The brief explicitly provides the data — 4x conversion rate for webinar attendees — and notes "we have not been using that insight in our email sequences." This email is the implementation of that insight. Its structure reverses the typical platform CTA logic: instead of "here is a deal, invest now," it is "here is why we are changing how we route you and what happens next."

The Transparency of the Data: Sharing the internal conversion data with the reader — that webinar attendees convert at 4x — is a trust move that also functions as a persuasion mechanism. The reader understands he is being given a piece of the platform's internal analytics. That transparency signals confidence and peer treatment. It also provides a logical reason to attend the webinar that is not "because we want you to invest" but "because you will be better informed if you do."

"We have been sending you to deal pages instead. This email is the change.": This explicit acknowledgment that the previous approach was wrong is a brand voice move that requires confidence to make. Most platforms do not say "our previous approach was wrong." CrowdStreet's stated voice — "transparency builds more trust than enthusiasm" — requires exactly this kind of statement. A platform that admits when its funnel was not serving investors is a platform that can be trusted to tell you when a deal is not right for you.

CTA Architecture: The webinar CTA is the only CTA in this email. There is no secondary "browse deals" link. Section 12's Friction Removal Protocol: distraction elements are eliminated from conversion emails. The investor who wants to browse deals can do so — but this email has one job and one path.

SEC Note: The 4x conversion claim requires legal review for external communication. Confirm with legal whether the figure can be stated as a specific multiple or whether it must be expressed as a range or relative statement. Insert the confirmed figure before deployment.

Email 4 — The Blended Portfolio Option

Day 12 of sequence · Legal review required — portfolio characterisation

JOB	Present the Blended Portfolio as the specific solution to the "I don't have time to evaluate individual deals" structural objection — without overselling it or underselling individual deals. Both paths are presented with honest tradeoffs.
TRUST LEVEL	Entry: Level 5 → Exit: Level 5 (the reader has been given a genuine choice architecture — not a single funnel)
EMOTIONAL STATE	The reader enters with a possible structural barrier: the feeling that individual deal analysis is more work than he has time for. He exits with a solution to that specific problem and an honest comparison of both options.
AWARENESS STAGE	Stage 5. Product awareness is complete. The email resolves the decision architecture question: individual deals vs. portfolio.

⚠ SEC / LEGAL REVIEW REQUIRED BEFORE DEPLOYMENT

Contains Blended Portfolio product characterisation — legal and product team must confirm accuracy of diversification claims, minimum investment, and advisor allocation description

Minimum 5 business days legal review. No performance figure, return reference, or investment characterisation may deploy without approved disclosure language.

SUBJECT LINE

If the barrier is picking the wrong deal.

PREVIEW TEXT *The option that removes individual deal selection from the equation — and what you give up for it.*

If the barrier is picking the wrong deal.

Commercial real estate deal analysis takes time. Evaluating a sponsor's track record, assessing market conditions in an unfamiliar metro, modeling out the return sensitivity to occupancy assumptions — this is the work of a real estate analyst, and most investors on this platform are not real estate analysts by profession.

There is a version of CrowdStreet for investors who want to do that work on individual deals. And there is a version for investors who want direct real estate exposure without the time cost of deal-by-deal analysis.

The CrowdStreet Blended Portfolio

The Blended Portfolio is a diversified fund structure across multiple CrowdStreet deals — office, multifamily, industrial, mixed-use — managed by CrowdStreet Advisors. Instead of selecting individual deals, you allocate to the portfolio and the portfolio allocates across deals.

Minimum investment: $25,000. Diversified across multiple assets and sponsors. [⚑ EXACT TERMS, DIVERSIFICATION CHARACTERISATION, AND CURRENT PORTFOLIO COMPOSITION TO BE CONFIRMED WITH PRODUCT TEAM AND REVIEWED BY LEGAL]

What you get: direct real estate exposure across multiple deals without the time cost of individual deal evaluation. You are relying on CrowdStreet Advisors' allocation decisions rather than making those decisions yourself.

What you give up: the ability to apply your own judgment to specific deals and the potential to concentrate in higher-conviction positions. The Blended Portfolio is a diversified product. It is not a way to bet on a specific deal you believe in.

Some investors start with the Blended Portfolio and later add individual deals as their familiarity with the platform and the asset class deepens. Some investors stay with the Blended Portfolio. Some investors prefer individual deals from the start and never use the Blended Portfolio. None of these is the correct answer — they reflect different levels of deal involvement preference and time availability.

What we will not do is recommend one over the other without knowing your specific situation. What we can do is make sure you understand both options before you make a decision about which one is right for you.

Individual Deals	**Blended Portfolio**
Minimum: $25,000–$100,000 per deal You select the deals Concentrated in your chosen assets Requires deal memo evaluation *Best for: investors with time and interest in deal analysis*	Minimum: $25,000 CrowdStreet Advisors allocates Diversified across multiple deals No individual deal selection required *Best for: investors who want real estate exposure without deal analysis time*

EXPLORE THE BLENDED PORTFOLIO

or

REGISTER FOR A DEAL WEBINAR

— CrowdStreet Investor Relations

STRATEGIC RATIONALE

Email Job: This email deploys the Blended Portfolio as a structural solution to a structural objection rather than as a product being sold. The brief identifies "I don't have time to evaluate individual deals properly" as a primary objection. The Blended Portfolio answers that objection directly — but the email presents both options with their actual tradeoffs, which is the CrowdStreet voice requirement and is also the correct trust move for a sophisticated investor who will detect and resent a one-option funnel.

The Comparison Table: The individual vs. blended comparison serves the investor who wants to make an informed choice about which instrument fits his situation. More importantly, it serves as a trust signal: CrowdStreet is not hiding the tradeoffs of the Blended Portfolio or overstating its benefits relative to individual deals. "We will not recommend one over the other without knowing your specific situation" is the most important sentence in the email for the reader's perception of the brand.

Dual CTA Architecture: This email contains two CTAs: Blended Portfolio and webinar registration. This is the only email in the sequence with a secondary CTA. The brief identifies the Blended Portfolio as a "lower-friction entry point" and the webinar as the highest-conversion step. Both paths serve different reader profiles at the same trust level — the investor who wants to go directly into a diversified product vs. the investor who wants to evaluate a specific deal after webinar attendance.

SEC Note: The Blended Portfolio characterisation — "diversified across multiple deals," advisor-managed, $25,000 minimum — requires legal and product team confirmation. The phrase "CrowdStreet Advisors allocates" must reflect the accurate legal structure of the product. All terms are placeholders pending confirmation.

Email 5 — The First Deal Close

Day 18 of sequence · Legal review required — performance-adjacent data

JOB	Execute the conversion close. Reframe the 3.2x repeat investment data as an investor insight — knowledge compounding — rather than a loyalty metric. Two CTAs. Relationship preserved for non-converters. Concierge call flag for approval.
TRUST LEVEL	Entry: Level 5 (conversion ready) → Exit: Action (webinar registration or Blended Portfolio) or graceful non-conversion with relationship intact
EMOTIONAL STATE	The reader enters with everything he needs to make a decision. The email serves either outcome: the investor who is ready has a clear, frictionless path; the investor who is not has an honest acknowledgment that the platform will be there.
AWARENESS STAGE	Stage 5. The sequence has answered every material question. The close confirms the invitation, removes friction, and preserves the relationship for all outcomes.

⚠ **SEC / LEGAL REVIEW REQUIRED BEFORE DEPLOYMENT**

Contains internal investment frequency data (3.2x) and investment characterisation — legal must confirm both the figure and the framing can be used externally

Minimum 5 business days legal review. No performance figure, return reference, or investment characterisation may deploy without approved disclosure language.

SUBJECT LINE

What actually happens after a first investment on CrowdStreet.

PREVIEW TEXT *The number we have a business reason to share — and what it actually means for your portfolio.*

What actually happens after a first investment.

We are going to share something from our platform data, and we want to be clear about the context before we do.

Investors who complete their first transaction on CrowdStreet go on to invest an average of [3.2] more times in the following 18 months. [⚑ LEGAL TO CONFIRM THIS FIGURE CAN BE STATED EXTERNALLY AND SUPPLY APPROPRIATE CONTEXT LANGUAGE]

The obvious reading of that number is: first-time investors become loyal customers. That is true, and it is good for CrowdStreet. We will not pretend otherwise.

The less obvious reading is what we think is more important for you: first-time investors invest more frequently because the first deal builds an evaluation framework that every subsequent deal benefits from.

What the first deal actually gives you

You learn to read a deal memo as a practitioner, not a student. The second deal memo takes less time to evaluate than the first because you have a comparison point.

You develop a baseline for sponsor quality assessment. Having evaluated one sponsor in the investment process gives you a reference point for the next.

You understand the deal lifecycle from inside it. Knowing what the quarterly reporting looks like, how distributions are handled, how the platform communicates deal status — this is knowledge that comes from participation, not from reading about it.

You know whether this asset class is right for your portfolio. That question cannot be answered theoretically. It can only be answered by being in a deal and seeing how it fits with the rest of your financial picture over time.

The 3.2 subsequent investments is not a loyalty statistic. It is a knowledge compound rate. Investors who make a first investment on CrowdStreet invest more in the following 18 months because they have built the analytical infrastructure to do so efficiently. The first deal is the cost of building that infrastructure.

We have been in your inbox for several weeks. Over that time we have answered the question of what happens when deals go wrong, why we changed our CTA to route through webinars, and how the Blended Portfolio differs from individual deal selection. This is the last email in this particular sequence.

The next step, if you are ready for it, is a webinar registration or a Blended Portfolio application. If neither is right yet, the platform and the deals will still be there when the moment comes.

If you have questions that this sequence did not answer, our investor relations team is available [CONTACT METHOD — TO BE CONFIRMED]. [⚑ FLAG: If the concierge onboarding call is approved, this is where it enters the sequence — replace the investor relations reference with a specific offer of a dedicated first-time investor call with a named CrowdStreet investor relations contact.]

— CrowdStreet Investor Relations

IMPORTANT DISCLOSURES

Past performance is not indicative of future results. All investments involve risk, including possible loss of principal. Commercial real estate investments are illiquid and are not suitable for all investors. Past performance figures referenced in this communication reflect [TIME PERIOD — LEGAL TO SPECIFY] and are presented net of [FEE STRUCTURE — LEGAL TO CONFIRM]. Returns may vary significantly and are not guaranteed. [FULL APPROVED DISCLOSURE — TO BE PROVIDED BY LEGAL TEAM]. CrowdStreet Advisors, LLC is a federally registered investment adviser. CrowdStreet, Inc. is not a registered broker-dealer. Nothing in this communication constitutes investment advice.

STRATEGIC RATIONALE

Email Job: This close executes Section 12's seven conversion components for a high-consideration, high-minimum investment context: bridge (reference to the sequence's arc), transformation restatement (knowledge infrastructure, not just return), value stack (the "what the first deal gives you" box), risk reversal (implied — honest about what they can't tell you without knowing their situation), urgency (absent — the platform will be there, honest), identity confirmation ("analytical infrastructure"), CTA. The 3.2x data is deployed transparently — including acknowledging the business interest — which is the only version of it available within the CrowdStreet voice.

"This is the last email in this particular sequence.": This explicit statement is the relationship preservation signal. It says: we are not going to keep emailing you indefinitely about this. We have made the case, provided the information, and the decision is yours. A platform that says "the platform will still be there when the moment comes" is a platform that trusts the long-term relationship over the short-term conversion. That trust is the correct closing register for an investor audience at this sophistication level.

The Concierge Call Flag: The brief identifies a dedicated concierge onboarding call for first-time investors as an unapproved but potential conversion lever. If approved, it enters here as the primary risk-reversal mechanism — replacing the general investor relations reference with a specific offer of a named, dedicated first-call contact. At $25,000+ minimums, a human touch at the final conversion moment is the highest-return investment CrowdStreet can make in this sequence. Flag this for approval immediately.

Knowledge Infrastructure Frame: "The first deal is the cost of building that infrastructure." This framing converts the first investment from a financial transaction into a learning investment — something the reader makes for future capability, not just current return. For the sophisticated investor audience who places high value on analytical competence, this is the most resonant identity activation available.

SEC Note: The 3.2x figure requires legal confirmation for external use. The performance disclaimer block in this email is mandatory and must contain approved language before deployment.

IMPLEMENTATION NOTES, ORCHESTRATION & LEGAL CALENDAR

The Concierge Call — Priority Approval Request

HIGHEST-LEVERAGE UNAPPROVED CONVERSION LEVER

The brief identifies a potential concierge onboarding call — a dedicated investor relations call for first-time investors — as an unapproved option. At the $25,000+ minimum investment level, a named human contact at the point of first commitment is not a nice-to-have feature. It is the single most effective risk-reversal mechanism available when no price incentive exists.

If approved before the April 15th deployment, the concierge call replaces the investor relations reference in Email 5 and becomes the sequence's primary risk-reversal mechanism. The specific implementation: Email 5 contains a named CTA to schedule a 30-minute call with a dedicated CrowdStreet investor relations contact, framed as "reserved for investors evaluating their first CrowdStreet investment." This is honest scarcity (genuinely limited by IR capacity), genuine value (experienced investors know how much a single informed conversation can accelerate a decision), and the correct closing register for the sophisticated investor audience. Approve and resource this before deployment.

Multi-Channel Orchestration Recommendations

At 45,000 accredited investors at $25,000+ minimums, the average transaction value makes multi-channel support cost-effective. Section 23's orchestration architecture applies.

Reader Signal	Recommended Channel Action
First investment completed	Remove from all active sequences within 1 hour. Trigger post-first-investment onboarding sequence (to be developed: covers deal dashboard, quarterly reporting cadence, how to evaluate the next deal). This is the highest-value sequence CrowdStreet does not currently have.

Reader Signal	Recommended Channel Action
Webinar registered — not yet attended	Trigger reminder email at 24 hours before webinar with deal memo summary. Trigger confirmation + preparation email at 1 hour before. Goal: maximise attendance rate from registration.
Webinar attended — no investment in 7 days	Route to investor relations personal outreach — a brief personalized email from a named IR contact referencing the specific webinar they attended. Not a CRM sequence. A human email.
Email 2 opened (risk email) — high read time, no subsequent click	High-intent skeptic profile. Route to IR personal outreach offering to answer specific questions. These investors are processing the risk disclosure carefully — they are the most likely to invest significant amounts if their specific concerns are addressed.
Opened all 5 emails, no action taken	Post-sequence: route to a 90-day re-engagement sequence with lower frequency. Include platform updates, deal performance reports (subject to SEC review), and a quarterly "what we are seeing in the market" analysis piece in the Ben Miller voice.
Attended webinar — invested in any amount	Enter the post-first-investment lifecycle sequence. The 3.2x subsequent investment data applies from this point. The sequence that operates here is worth more than the acquisition sequence.

The Post-First-Investment Sequence — Critical Gap

THE SEQUENCE THIS BRIEF DOES NOT ASK FOR BUT SHOULD EXIST

The brief's most important data point: investors who complete a first transaction invest an average of 3.2 more times in 18 months. CrowdStreet's entire revenue model is in that sentence. The sequence that operates after the first investment — the one that builds the knowledge infrastructure, normalises the deal evaluation process, and makes the second and third investments feel like natural progressions rather than new decisions — is the highest-value email sequence CrowdStreet can build.

This deliverable covers the pre-first-investment activation sequence. The post-first-investment sequence — onboarding, deal education, portfolio review, ascension toward higher minimums and more frequent investing — is the sequence that compounds the value of every conversion this sequence produces. It should be the next SERAPH engagement after this sequence is deployed and performance data is available.

SEC Legal Calendar — April 15th Deployment

LEGAL REVIEW SCHEDULE

Target deployment: April 15, 2026. Minimum legal review window: 5 business days. Recommended: 10 business days to allow a revision cycle.

Priority order for legal submission:

1. Email 2 (deal failure / Nightingale shadow) — highest legal sensitivity, must be reviewed first. Submit by April 1st.
2. Email 5 (3.2x figure and close) — performance-adjacent data requires external use confirmation. Submit with Email 2.
3. Email 1 (investment characterisation) — lower risk but requires review. Submit by April 3rd.

4. Email 3 (4x webinar claim) — conversion data for external use. Submit by April 3rd.
5. Email 4 (Blended Portfolio characterisation) — product accuracy. Submit by April 5th.

Note: All testimonials used in deployment must comply with SEC Regulation Best Interest testimonial rules. Legal must review all investor quotes before deployment. No testimonial may imply investment returns without full disclosure language.

Optimisation Baseline

Email	Primary Metric	Diagnostic Interpretation
Email 1	Open rate vs. baseline 28%. Read time.	Open rate should hold or improve — this subject line is more specific than deal announcement subject lines. Low read time means the opener failed to demonstrate peer understanding. Test alternate first paragraph.
Email 2	Read time. Email 3 open rate (primary signal).	Email 2 has no CTA. Its success metric is whether Email 3's open rate is elevated compared to Email 2's — indicating the trust move landed. Readers who processed the risk disclosure will be more invested in what comes next.
Email 3	Webinar registration rate. Benchmark: meaningfully above deal page CTR from previous sequences.	The funnel change's success is measured here. If webinar registration rate does not exceed the previous deal page CTR, review whether the webinar format/timing/topic is right before changing the email copy.
Email 5	First investment completion rate. Webinar registration rate (secondary).	Separate webinar registration from investment completion. The sequence may produce registrations that convert later, after webinar attendance. Track both 7-day and 30-day windows post-Email 5.
